### 4 Simple Microwave Cleaning Hacks That Work!

#### How to clean a microwave

Home microwave ovens have been popular for over fifty years. In 1967, the Amana Radarange first went on the market. Now, it's hard to find an American kitchen without a microwave. And it's also hard to find an American that doesn't have a story to tell of an exploding bowl of spaghetti, or some other similar microwave catastrophe. Do you try your best not to look around the inside of yours when you're putting food in or taking it out? If it's used, often or not, it more than likely needs a good scrubbing. But don't worry, a dirty microwave is not a big deal. We're going to show you the best way to clean a microwave using four different methods. And we're not just talking about a surface cleaning — these hacks go beyond the splatters to tame super-smelly microwaves, too!

#### Hack #1: Cleaning With Vinegar

1. Using a microwave-safe bowl or large glass measuring cup, fill it with two cups of water and two tablespoons of vinegar. You can add one drop of your favorite essential oil to lessen the smell of the vinegar, if you want. Place the container in the microwave.
2. Turn the microwave on high for five minutes. You want it to get really steamy in there. Don't open the door for another fifteen minutes, to make sure all the baked-on grime has softened.
3. Carefully remove the container. Note: It might be hot.
4. Remove the turntable, and wipe it down with a clean rag.
5. Wipe down the sides, door, bottom and top of the inside of the microwave with paper towels or a rag, being sure to avoid getting any liquid in the vents. If spots remain, use a sponge dipped in the water/vinegar solution.
6. Replace the turntable.
